STATE CAPITOL

STATE OF MONTANA

HELENA, MONTANA 59624
P.O. Box 1728

Dear Reader:

The purpose of this publication is to report labor market information for the state of Montana and United States. It is one of several reports published periodically and provides historical, current, and projected labor market information.

It is hoped that this information will be of value to officials and persons with responsibilities for development and implementation of employment and job training programs.

Comments, suggestions, and questions regarding content and format are invited.

Sincerely,

Bob Rafferty

Bob Rafferty, Chief
Research & Analysis Bureau

GLOSSARY OF TERMS

1. Civilian Labor Force - the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.

2. Employed - those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.

3. Unemployed - the number of persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).

4. Unemployment Rate - the number of unemployed expressed as a percent of the civilian labor force.

5. Residence Data - a count of people by where people live.

6. Establishment Data - a count of jobs by where people work.

7. Seasonally Adjusted Labor Force Series - to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed using the X-11 ARIMA method of seasonal adjustment. This is the same method used by the Bureau of Labor Statistics to seasonally adjust the national labor force series.

8. Real Spendable Average Weekly Earnings of Private Nonagricultural Production Workers - represents the earnings of a hypothetical individual after deductions for State income, Federal income and Social Security taxes, and adjustment for change in purchasing power since 1967. This individual is assumed to be sole support for a family of four, earn the average weekly gross earnings of production workers in Montana's private nonagricultural industries, and take standard deductions on State and Federal income taxes. Taxes were computed using standard tax tables, and purchasing power was adjusted by deflating Spendable Earnings based on the national Consumer Price Index.

9. MSA - Metropolitan Statistical Area - as determined by the Office of Management and Budget. The MSA must have a central city with a population of 50,000 or more.

10. LFA - Labor Force Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding it.

11. SDA - The Job Training Partnership Act (JTPA) was established to replace CETA in job search, placement, relocation, and especially training assistance. Each state designs local plans for JTPA programs through a Private Industry Council (PIC). Each PIC jurisdiction is known as Service Delivery Area (SDA). The two SDA's for Montana are known as Rural CEP (Beaverhead, Broadwater, Deer Lodge, Granite, Jefferson, Lewis & Clark, Madison, Meagher, Powell, and Silver Bow counties) and Balance of State (the other 46 counties).

12. BENCHMARKING - It is a continuous process of establishing a new set of data which affects the series of estimates through revisions. Once a new benchmark is established, the adjustments to estimates between the new benchmark and the preceding one are carried forward progressively to the current month by use of sample trends. The benchmark is established less frequently (usually once a year) based on sample or secondary data. In case of employment data, the benchmark is used to establish the level of employment, while the sample is primarily used to measure the month - to - month changes in the level.

13. CES-790 Program - current employment statistics survey produces monthly estimates of a wide variety of employment and earnings information for the nation and each state.

14. LBPM - Represents Labor Market Projection Model1 developed by the Lawrence Berkley Laboratory. The basic method of LBPM is a demographic cohort aging model that relies upon 1980 census data, along with labor force trends from Montana's Research & Analysis Bureau.

DESCRIPTION AND RANKING OF MONTANA

Montana can be described as a large, sparcely populated state that depends on natural resources for most of its economic prosperity. Further economic characteristics can be defined by spliting the state into eastern and western halves. The open grass plains of eastern Montana support extensive grain fields and provide grazing for large herds of beef cattle. In recent years, the exploration and development of fossil fuels has been an increasing activity and now a significant employment area. In the mountainous western part of the state the major economic activities are metal mining, lumber and wood product manufacturing, and tourism.

Primary industries determine the direction of a state or local economy. Industries considered primary in Montana include manufacturing, agriculture, mining, tourist related, railroad, heavy construction (highways/electric power plants), and federal government.

Another influence on Montana's economic development is the small business. In the private, nonfarm wage and salary jobs, 43 percent of jobs are in firms with less than 20 employees and 77 percent of workers are with firms that have less than 100 employees.

MONTANA'S RANKING AMONG 50 STATES

Item	Rank	Montana	U.S.
Total population 1980.....	44th	786,690	226,545,805
Land area 1980.....	4th	145,392	3,539,295
Population per square mile 1980.....	48th	5.4	64.0
Percent change in population, 1970-1980..	27th	13.3%	11.4%
Median age 1980.....Years	35th	29.0	30.0
Population 65 years old and over 1980....	30th	10.7% of population	11.3% of population
Persons living in different State in 1975 (5 years old and over) 1980.....	14th	15.0% of population	9.7% of population
Homeownership rate 1980.....	23rd	68.6%	64.4%
Percent high school graduates (persons 25 years old and over) 1980.....	8th	74.4%	66.5%
Unemployment rate 1985.....	18th	7.7%	7.2%

Motor vehicles per 1,000 population 1980.	6th	908	713

THE NATIONAL ECONOMY
WHAT HAPPENED IN 1985 AND WHAT'S AHEAD?

A comparison of economic activity in the nation at year's end reflected the following annual changes:

INDICATOR	1985	1984
GROSS NATIONAL PRODUCT (In 1972 dollars-% change)	2.4%	6.6%
INFLATION (Year to Year Change)		
Consumer Price Index	3.5%	4.3%
Producer Price Index	-0.5%	2.4%
GNP Deflator	3.3%	4.1%
EMPLOYMENT (Annual Average)		
Employed (in thousands)	107150	105005
Unemployed (in thousands)	8312	8530
Unemployment Rate	7.2%	7.5%
INTERNATIONAL		
Mdse Exports (change from year ago)	-1.9%	10.4%
Mdse Imports (change from year ago)	5.2%	25.7%
Mdse Trade Deficit (billions of dollars)	127.4	106.2
Deficit in Current Account (billions of dollars)	114.0	107.4
MISCELLANEOUS		
Savings as a percent of disposable personal income	4.7%	6.5%
Housing starts (in millions)	1.7	1.8
Automobile output (in millions)	8.1	7.6
Raw Steel Output (millions of net tons)	87.2	91.0

The steady if unspectacular economic activity of 1985 will continue into 1986 for at least the first 6-9 months. However, all the concerns about the economy in 1985 are still around in 1986, and these worries will become compounded by a worsening of the fundamentals in the consumer sector. It is probable that a slowdown in the economy will occur in the fourth quarter of 1986, expand into a recession in 1987, and recovery will be slow and moderate during the balance of the 1980's.

Consumer debt is at an all time high. The continued deflationary situation leaves little room for increased profits by manufacturers unless the consistently low productivity improves.

Despite lowered interest rates, capital expansion is lagging partly because industry is waiting to see if tax reform becomes a reality and accelerated depreciation becomes a thing of the past, and partly because consumer debt could finally erupt into a slowdown of consumer purchases.

The import/export imbalance doesn't appear to be subject to improvement during the next twelve months despite the fall in value of the US dollar. The increasing competition from world markets especially third world countries is preventing the US from regaining their share of exports competitively.

Although US car sales increased in 1985 primarily due to accelerated programs of low cost financing and the added restrictions of imports of foreign automobiles, 1986 and 1987 will tell a different story. Restrictions have been lifted, US auto makers have done very little to improve the quality of American made cars, and along with Japan, other countries such as Yugoslavia and Romania are attempting to break into the American market by selling very economical sub compact cars.

The plight of textile and steel manufacturers, that of fierce competition from foreign manufacturers, will be with us during the balance of the 1980's.

The American farmer can continue to look at hard times as traditional big importers such as China and India move toward agricultural self-sufficiency. Additionally, competition from Australia, Canada and Argentina will continue to make inroads into our export business. To counter this competition, the administration will be forced to continue support programs for surplus commodities or resort to programs similar to the 1983 Payment In Kind (PIK) to compensate farmers for non-production. At a time when efforts to reduce the deficit are in place, such programs will only result in increasing federal expenditures and hamper deficit reduction goals.

Sluggish growth in the high technology industries and flat capital spending can be expected in the next 12-18 months. Mergers will continue as in 1985, and those who survive will have to emphasize service, quality and price.

Pharmaceuticals is one industry that may increase its export business due to pending legislation that will legalize exporting drugs still not approved by the FDA to 15 industrialized countries.

The Services industries will continue to grow at a greater rate than manufacturing but the consumer debt situation and events in Washington will influence the rate of growth of this industry.

Hospitals are already feeling the crunch of deficit reduction efforts since Medicare payments have been frozen and further cuts are looming for both Medicare and Medicaid allowances as deficit reduction measures are put in place. The competition from Home Maintenance Organizations (HMO's) and prepaid health programs will further deteriorate hospital growth.

Retailing will also feel the brunt of consumer debt. With savings rates at their lowest in our history, and debt at its highest, consumers are at a position of forced retrenchment. The result will probably show in reduced expenditures for expensive durable goods and some slight increase in expenditures for less expensive nondurable goods.

Major repercussions are still plaguing the deregulated airlines industries. Takeovers, Chapter 11 bankruptcies, discount airfare wars and two-tier wage scales are factors the airlines are confronted with and will continue to deal with for the balance of the 1980's.

Growth in housing could continue to increase due to significant reduction in mortgage interest rates. However, several factors could mitigate the effects of the lowered rates. One is the fact that mortgage holders have raised the downpayment requirements, and are stricter about other debt loads potential buyers are carrying. Second, the overbuilding of rental apartments and condominiums in many parts of the country has created a glut that becomes attractive to the borderline home buyer. Third, the fact that the first

home buying population group is shrinking rather than growing as in the 1970's, will mitigate the demand for new single homes. Finally, the dramatic decrease in real estate appreciation during this deflationary cycle is forcing many home owners to remodel and improve current homes rather than sell and move up to more expensive homes.

Banking and Insurance industries will have tough going during the balance of the 1980's. Competition from non bank banks are taking a toll on profits. The chipping away of the Glass Steagall Act of 1933, which bars commercial banks from dealing in corporate securites, is resulting in some banks treating loans like securities and thus are buying and selling and trading their mortgages. This is particularly prevalent with foreign countries. Also, the need to maintain higher loan/loss reserves, cuts into the working and profit margins of most banking institutions. The Insurance business is facing a crisis due to the increase in lawsuits by the public. The high cost of insurance is causing many consumers, both businessmen and professionals, to drop insurance policies.

National review copied from Colorado Annual Planning Information Report Program Year 1986.

Montana in Review
1985

Montana's economic prosperity was minimal in 1985. Meanwhile, the national economy is continuing a growth period unmatched in recent business cycles.

After a two year improvement, Montana's 1985 nonfarm wage and salary employment survey indicates 2,700 fewer jobs existing than in the previous year. This 1.0 percent workforce reduction compares unfavorably to the nation's 3.4 percent increase in jobs. Half way through 1985 employment levels in Montana and only three other states was less than one year ago.

Montana's services industry is the only major industry maintaining growth in 1985. Industries leading the job losses were mining, manufacturing, wholesale trade, and construction. Major industries with minimal employment shifts were transportation/communication/utilities, retail trade, finance/insurance/real estate, and government.

Several factors are contributing to Montana's economic erosion.

1. Agriculture is experiencing a sharp decline in revenue that was created by the past drought and the low crop prices. Montana's drought was the worst in at least twenty years.
2. New business startups were fewer than any of the previous years since 1981.
3. The oil and gas exploration activity has been dwindling

since its peak in 1981. Drilling rig results in this industry are down 40 to 50 percent.

4. The construction industry is showing a strong decline in both housing development and commercial projects.
5. The lumber and woods industry is continuing to struggle in a very competative market. Many lumber mills have closed throughout the northwestern United States, but the production capacity is still greater than product demand.
6. Montana is continuing a weak recovery brought on by the loss of several thousand basic jobs during of the early 1980's.

Current estimates of non agricultural earnings for production workers indicates that average earnings improving by 2.7 percent from 1984 to 1985. However, Montana is losing ground with the national average weekly earnings. In 1982 Montana's average weekly earnings was nearly one percent more than the U.S. average, and in 1985 Montana's pay for production workers became five percent less than the national average.

Montana's unemployment rate is increasing again. The unemployment rate shifted from 7.4 percent in 1984 to 7.7 percent in 1985. The national unemployment rate is showing a positive change - declining from 7.5 percent to 7.2 percent. Montana's 1985 unemployment rate became greater than the national rate for the first time since 1978.

Mining

Metal mining employment shifted downward in 1985 but this industry appears to have an optimistic outlook for the next few years. However, gold and silver mining operations in reaction to lower precious metal market prices reduced the workforce by about 200 personnel between 1984 and 1985. Several mining operations will start their construction phase this year and into 1987. Many of the new and planned developments are located in the mountains in rural western counties and employment will range between 100 and 250 workers.

Coal mining, just a few years ago, was viewed as the bright spot in Montana's economy. The coal production contracts now indicate a fairly flat production outlook. The "window of opportunity" (a 2½ year time period that allows new coal contracts to have one-third less severance tax) has not yet developed many new coal contracts. Competiition for new coal business and slowing down in coal demand by utility companies results in only a hopeful future growth picture.

Oil & gas exploration in Montana experienced a ten percent decline in wells drilled from 1984 to 1985. The oil and gas industry was scheduled for a further reduction in 1986 by many major companies even before the world oil price collapsed. The daily active rig count in 1984 centered around the low 30's, and in 1985 the rig count dropped to the middle 20's. The recent price slump reduced rig activity in May 1986 to between 7 and 11. Even if the oil price would make a substantial increase, the exploration commitment

would be very slow in coming back.

Construction

Construction employment has been in a general decline since 1978. Although recent interest rates have been favorable for home construction, Montana residents are not entering into home construction loans as much as the national picture. The overall sluggish state economy has taken its toll and the existing number of homes for sale is extremely high. Three major considerations influence a continued decline in the construction workforce: demographic shifts will require fewer new homes to be built; most of the interstate highway system construction has been completed; and no major construction projects, such as power plant development, is scheduled for the next few years.

Manufacturing

For the most part, manufacturing activity in Montana consists of industries based on the state's natural resources and firms producing goods for consumption in the state. In 1985, manufacturing employment showed a four percent loss in jobs and the reduction was concentrated in three industries: food products, lumber and woods, and primary metals. The decline in the food products work force followed a national pattern. Also, the sugar manufacturing industry utilized fewer workers in 1985 because of a small sugar beet crop production. The lumber and woods employment shrinkage this past year probably will continue for several years. The mills production is near the same amount in 1984 and 1985, but

the work force is still declining from productivity improvements. Future forest products employment reduction will be caused by a combination of forces such as marketing challenges from new substitute products, automation, both in mills and logging areas, competition from regions and Canada, and changes in the U.S. Forest Service logging policy. The biggest challenge for primary metals employment is keeping the aluminum production going. Montana's only aluminum plant recently became an employee owned facility and has only short term production contracts. The long term outlook will be influenced by electric power cost which is about one-third of the total production cost.

Montana has yet to see much development in "high tech" products as many states have experienced. In fact, the turn-over of firms in electronic manufacturing has been quite noticeable in Montana. A stronger interest in selling products to the U.S. government is occurring by the state's manufacturers. The largest employer in northeastern Montana has a production facility in Poplar that thrives on government purchases of their products. Overall, Montana ranks very low with other states in product sales to the U.S. government.

Transportation/Communication/Public Utilities (TCU)

Nearly all sectors of this industry noticed an employment decline in 1985. Only the trucking industry experienced a reasonable improvement. This year does not indicate much improvement, espe-

cially in railroad employment. A complete shutdown of a maintenance facility in Livingston caused a 360 job loss and closing a regional office in Billings will result in about another hundred job loss. Some of the major utilities are reducing work hours and dealing with a hiring freeze in their economic crunch. The major telephone service companies are still in a reorganization and automation phase that will cause about a one percent decline in employment each year until about 1990.

Trade

Wholesale trade employment has declined three out of the past four years and 1985's reduction was the largest. Both durable goods and nondurable goods businesses have been losing jobs. Many of the agriculture supportive enterprises are in wholesale trade and these firms have been hurt by the farm economic woes.

In 1985, retail trade experienced one of the few years that employment failed to grow. Building material/garden stores and eating and drinking establishments were leaders in the loss of jobs. Specifically, sea food restaurants closures were evident in most major Montana cities. Food stores and auto dealer/service stations sectors did notice a reasonable work force increase.

Finance/Insurance/Real Estate (FIRE)

Overall, this industry had a small decrease in employment but the various sectors was split between small job gains and small job

losses. Banking employment noticed the largest job reduction, while credit agencies improved the most. Several banks have been consolidating some of the operations to one city in the past two years and this has caused most of the job loss. The current slower economic and population growth will influence a milder expansion of FIRE jobs as compared to the moderate growth in the last decade.

Services

Following the national trend, services will continue to be the fastest growing industry and in 1985 it was the only major industry to realize a gain in jobs for Montanans. Nationally, job growth in the service division accounted for 40 percent of the total private job growth from 1984 to 1985. Increasing discretionary income, the growing complexity of the business world, and increasing demand for leisure time activities and health care have all been fundamental factors that have led to large increases in services employment.

Government

Balancing the budget at all three levels of government (federal, state and local) is a strong issue influencing a downward job opportunity in government. This year will have even more job uncertainty than in 1985 as the necessities of balancing the state and national budget occurs by reducing government programs.

1987 Population and Civilian Labor Force Outlook

A positive outlook has been projected for Montana's 1987 civilian labor force. Dropping to 7.2 percent, the unemployment rate in 1987 will be the lowest since 1981. In the next two years, unemployed persons will be slightly fewer than the current jobless count. Economic activity should allow employment to increase by 7,500 workers over the next two years. This job expansion amounts to a one percent annual increase - low by historical standards.

Demographics and a continuing weak state economy keeps the job growth modest. Fewer youth will be entering the labor force as the "baby boom" generation ages. Montana's economic dependency on natural resources creates a slow prosperity outlook under current world market conditions.

Population increases are occurring at a slower rate. Revised Montana population in 1985 was 826,000, which is only a 3,000 enlargement from the previous year. In 1987, the state's population is expected to be 834,000. This would be an increase of 4,000 per year from 1985's population figure.

Montana's population increased by five percent in the period 1980 through 1985. In comparison, the growth rate of the western region of the United States amounted to 10.8 percent while the nation experienced a 5.4 percent increase in population.

Montana's population increase is mainly attributed to more births than

deaths balanced against a net migration factor of zero. That is, about the same number of people left the state as moved here between 1980 and 1985, while the birth rate accounted for the 39,000 person increase.

NATIONAL ECONOMY
INDUSTRY TRENDS DURING THE BALANCE OF THE DECADE

Almost nine out of every ten jobs added to the economy during the next decade will be added in a service-producing industry, (transportation, communication, public utilities, trade, finance, insurance, real estate, business, personal and medical services and government). The remainder are projected to be goods-producing jobs (manufacturing, construction, mining and agriculture). However, as stated above, employment growth during the next decade will be moderate as the following chart indicates:

INDUSTRY SECTOR	PROJ. EMPLOY. (000) 1990	AA % CHG 1984-1990
Total	116,865	1.5
Agriculture	3,125	- .7
Nonagriculture	113,701	1.6
Government	16,596	.6
Federal	2,790	- .1
State & Local	13,806	.8
Private	97,105	1.7
Mining	659	.2
Construction	6,189	.7
Manufacturing	20,913	.9
Durable	12,349	1.5
Nondurable	8,041	.0
Transportation, Communications and Public Utilities	5,957	1.3
Trade	27,106	1.8
Finance, Insurance, Real Estate	6,991	1.8
Services	28,142	2.8
Private Households	1,148	-1.3

The most significant changes in distribution of industry sectors has occurred in the Manufacturing, Trade and Services sectors. In 1959 Manufacturing jobs were 25% of total employment, and in 1990 it is expected that the proportion of manufacturing jobs will only be 18%. Employment in trade was at 20% in 1959 and is expected to be at slightly over 23% in 1990, and the greatest change has come about in the Services industries, 14% in 1959 and 24% in 1990.

The following industries are expected to be the fastest growing in the next decade:

INDUSTRY SECTOR	AA % CHGE 1984-1990
Medical services, NEC	4.3
Business services	4.2
Computers & peripheral equipment	3.7
Materials Handling Equipment	3.7
Transportation services	3.5
Professional services, NEC	3.5
Scientific and controlling instruments	2.9
Medical instruments and supplies	2.8
Doctors' and dentists' services	2.6
Plastics products	2.5

The industries that will provide the most jobs during the next decade are listed below:

Business services
Retail trade, except eating and drinking places
Eating and drinking places
Wholesale trade
Medical services, NEC
Professional services, NEC
New construction
Doctors' and dentists' services
Hotels and lodging places
Credit agencies and financial brokers

Those industries which will decline most rapidly during the remainder of the decade are:

Cotton
Wooden containers
Leather products, including footwear
Iron and ferroalloy ores mining
Sugar
Leather tanning and finishing
Railroad transportation
Nonferrous metal ores mining, except copper
Dairy products
Blast furnaces and basic steel products

Employees and employers will be faced with some significant issues in the last half of the decade such as:

- Reduction in wage increases and benefits for both union and non-union employees.
- Promotion of alternative health care programs so that employers can cut health care costs.
- Controversy over testing for drug use, AIDS, honesty etc. Currently, approximately one-fifth of all large businesses use them to screen applicants.
- Continued struggle to implement comparable worth salary structures for traditional female and male oriented occupations.
- Expansion of job sharing, flexitime and computer networking environments in the workaday world.
- Recognition of the fact that the proportion of workers age 35-54 is on the upswing so that laws concerning mandatory retirement and age discrimination will have to be reversed. Legislation concerning vested rights will also have to be addressed so that the older worker will have the option of retiring early, retiring later or retiring with bigger pensions.

NATIONAL OCCUPATIONAL OUTLOOK

Occupational growth trends are expected to depart from the recent past for many broad and detailed occupational groups. Some occupations, especially in the clerical group are expected to slow their rate of growth considerably, while others mainly blue collar occupations that grew in the past, are expected to decline. These changes result from changes in industry growth trends, a projected slowing of total employment growth and from technological changes that affect the occupational structure of industries. The main causes of occupational structure changes are technological change, changes in business practices and methods of operation and product demand changes. The growing use of computer technology is expected to increase the need for systems analysts and computer programmers in nearly all industries and, therefore, these occupations will account for an increasing share of employment. An example of changes due to structure of an industry is the growing tendency of businesses to contract out building cleaning services. This will reduce the proportion of janitors and cleaners on industry employment records but will be offset by significant employment gains in the building cleaning services industry. An example of changes in demand for goods and services provided by an industry level is the educational services industry, which will have an increase in demand for elementary school teachers as the number of elementary school age children rises, but a decline in demand for college teachers as the number of college age students decline. An annual average growth rate of 1.5% is expected during the upcoming decade. The executive, managerial and administrative occupations, professional specialties and technicians and related workers groups are all expected to have growth rates larger than the overall employment growth rate. Despite this projection, growth in these occupations will be slower than they were in the 1973-1984 period.

EMPLOYMENT PROPORTIONS OF MAJOR OCCUPATIONAL GROUPS

OCCUPATION	1984	PROJ. 1995
Executives, Administrators and Managerial Wkrs.	10.6	11.2
Professional Workers	12.0	12.7
Technicians & Related Wkrs.	3.0	3.4
Salesworkers	10.5	10.9
Private Household Workers	.9	.7
Service Wkrs, X Hsehld	14.6	15.4
Precision Workers	11.4	11.1
Operators, Fabricators etc.	16.2	15.2
Farming, Forestry, Fishery	3.3	2.8

The above table affirms the projections of increases in managerial, professional, technical and service oriented workers, both in numbers and in proportions to total employment.

The following chart indicates the projected fastest growing and fastest declining occupations during the period 1984-1995.

FASTEST GROWING OCCUPATIONS	FASTEST DECLINING OCCUPATIONS
Paralegal Personnel	Stenographers
Computer Programmers	Sewing Machine Operators, Shoe
Computer Systems Analysts	Railroad Operators
Medical Assistants	Rail Car Repairers
Data Processing Equipment Repairers	Furnace, Kiln Operators
Electrical & Electronic Engineers	Shoe & Leather Wkrs & Repairers
Elec & Elec Technicians & Technologists	Private Household Workers
Computer Operators, X Peripheral Equip	Telephone Install & Repairers
Travel Agents	Sewing Machine Oper, Garment
Physical Therapists	Textile Machine Operators
Physician Assistants	Mach Mntce Mech, Textiles
Sec. & Fincl. Svcs Salesworkers	Statistical Clerks
Mech Engineering Techs	Ind Truck & Tractor Operators
Lawyers	Central Office Operators
Correction Officers & Jailers	College & Univ Faculty
Accountants & Auditors	Farm & Home Mgmt Advisors

Most analyses of future job opportunities focus on the employment growth in industries and occupations. Because faster growing industries and occupations generally offer better opportunities for advancement, employment growth is an important gauge of job outlook. However, it is not the only one. Another element in the employment outlook is replacement needs. Replacement openings occur as people leave occupations for the following reasons:

- transfer to other occupations as a step up the career ladder or to change careers
- temporarily leaving the labor force to return to school or care for a family
- leaving the labor force permanently due to retirement.

As a consequence, replacement needs are more important than job openings due to growth in an occupation. Estimates for openings due to replacement indicate that they are from 2 to 5 times greater than growth openings in many occupations.

A third consideration in evaluating the data on occupational demand is the availability of workers in various occupations. Very often the supply exceeds the demand despite growth and replacement needs because the supply of workers has been expanding at a faster pace than either.

Another element in analyzing occupational demand is to consider those occupations which will show the largest growth in numbers of jobs. The following table lists those occupations that will generate the most jobs in the economy during the 1984-1995 period:

OCCUPATION	% CHGE 1984-1995	% TOT JOB GROWTH
Cashiers	29.8	3.6
Registered Nurses	32.8	2.8
Janitors & Cleaners	15.1	2.8
Truck Drivers	17.2	2.7
Waiters & Waitresses	26.1	2.7
Wholesale Trade Salesworkers	29.6	2.3
Nursing Aides	28.9	2.2
Salespersons, Retail	12.6	2.2
Accountants & Auditors	34.8	1.9
Teachers, Kindergarten	20.3	1.9
Secretaries	9.6	1.4
Computer Programmers	71.7	1.5
General Office Clerks	9.6	1.4
Food Preparation Workers	22.1	1.4
Fast Food Preparation Workers	17.9	1.3
Computers Systems Analysts	68.7	1.3
Electrical & Electronic Engineers	52.8	1.3
Electrical & Electronic Eng Techs	50.0	1.3
Guards	25.6	1.2
Automotive Mechanics	20.1	1.2
Lawyers	35.5	1.1
Cosmetologists	28.7	.9
Cooks, Restaurant	29.7	.9
Maintenance Repairers, Genl Util	15.6	.9

A comparison of the fastest growing occupations and those that generate the most jobs shows that all the fastest growing jobs require education beyond high school, whereas only one-third of the occupations that produce the most jobs require education beyond the 12th grade. A further observation indicates that those jobs that are not professional primarily fall into the service type occupations. A fact of particular interest is that not one blue collar job (precision workers, assembly and construction workers) appear on either list.

Occupational projections are primarily used by counselors, career analysts, job training program administrators, business developers, students and community agencies, to evaluate choices of careers relative to employment opportunities as well as sources of labor supply.

It is, therefore, important to evaluate those occupations which are projected to grow the fastest in the next decade vis a vis those which are generating the most jobs. Those occupations that will be growing the fastest are falling in the health, personal and business services industries, while those that will employ the most workers are projected to fall in the services industries. The former are primarily professionals and/or paraprofessional occupations which require education beyond high school, reflect salaries above average and generally enjoy low turnover rates, thereby indicating that demand will be more moderate than the latter group of occupations. On the other hand, those occupations falling into the group generating the most jobs, workers are often trained on-the-job, required educational skills are usually at the high school or vocational school level, have a high turnover rate and salaries are at the low end of pay scales. These jobs are particularly good for new entrants to the labor force, those who want part-time employment and those with few skills, but they have little place for training and career development in the long run.

It should be noted that in some few instances, occupations appear on both lists (lawyers, engineering technicians and technologists, computer programmers, accountants and auditors). When making career decisions consideration should be given to those occupations that are projected to grow the fastest and to generate the most jobs as well.

In keeping with the projected slow growth in manufacturing it should be noted that most of the occupations of fastest declining occupations fall into the blue collar categories.

National review copied from Colorado Annual Planning Report Program Year 1986.

INDUSTRIAL OVERVIEW

Between 1984 and 1990, Montana is expected to gain 18,000 new jobs. This amounts to a 1.1 percent growth in the number of jobs each year of the six year period. This is a substantially slower rate than experienced in the sixties and seventies, but better than the first half of the eighties. A 1.1 percent annual average growth rate translates into 3,000 new jobs each year.

MONTANA'S 1982-1990 OCCUPATION OUTLOOK REVIEW

Jobs in Montana are concentrated in relatively few occupations. The alphabetical detail occupational listing has 532 total occupations. From this list, the largest 55 occupations controls two-thirds of the total employment. The top five occupations include retail sales persons, truck drivers, janitors, secretaries, and waiters/waitresses. These five job functions amount to 15 percent ot the total work force. The training or education needed for most of the larger employment occupations is not extensive and many jobs are low skilled positions. However some, such as nurses and teachers, do require several years of college.

In reviewing the total annual average job opening series, three-fourths of the job openings are due to labor force separations and the other quarter are due to growth. The overall economic conditions in Montana should be considered when applying the average openings, especially the openings due to growth. For example, 1985's employment data indicates a one percent decline occurred rather than a one percent improvement in job growth as the forecast annual average perceives.

White collar and service occupations comprises nearly all of the job growth between 1984 and 1990. The blue collar job growth is small but the openings due to separations is a significant count. The blue collar occupations contributions to the total jobs is only one out of 100 growth jobs but is nearly one out of five jobs due to labor force replacement needs.
